## Case study: Implementing Trouble Free Operations programme

## **Implementing Trouble Free Operations programme**

Skill4 is committed to providing training initiatives that can cross borders and adapt to local approaches without losing the common core elements.

Our client, a Swedish-based bearing manufacturer needed just such an approach. It had decided to opt for worldwide implementation, because it wanted to introduce the concept of Trouble Free Operations (TFO) in a uniform manner, in over 45 countries, ranging from Sweden itself, to Singapore, South Africa, much of South America and the whole of Europe.

Skill4 International met the need, in local languages, through its worldwide network of international licensees.

Bearings are small but vital components in just about every high-value, mission-critical mechanical device in the world. The consequences of bearing failure can be severe and immediate. The TFO concept pioneered by our client aims to keep its customers failure-free.

"Skill4 International has helped us to train engineers how to implement and sell the TFO concept to customers and to gain their commitment to the monitoring procedures and planned maintenance schedule such an approach needs."
